Got it. We'll stay in touch. Well make sure you have a mixer if you want to try one. Whether we make you one at Davis machine where I work, or I ship you the one I have. I'll check on some costs.

Hi again Rob,
Just got word from Scott Mader that Marcin wants to delay the workshop until February. I'll have to figure out if/how that affects the production schedule.
Regards,
Aidan

Hey Rob,
Thanks for getting back to me. The workshop is in Belize in November. I'm heading down there in August to start analysis, preparation, and block pressing. The idea is to press all the blocks a month in advance to give them a chance to properly cure. I'll be pressing test blocks as soon as I can- hopefully in August- but won't need the mixer until I go into production. So I'd like to have access to one in September/October at the latest.
I'd give you my cell number but I'm between cell plans right now. Using Signal for calls/texts. If you have it my number is 6106057300.
Aidan

Hey Aidan, hopefully I can help somehow. Let me know when you would need a mixer and how long you might need it, just so I can have an idea of what month. When is the earliest you might like to have access to one?
Thanks

Rob Beddingfield

Hi Rob,

I'm Aidan from the YouTube chat. I wanted to know if you would consider lending or renting your soil mixer attachment to Scott Mader for his upcoming Microhouse workshop in Belize. I'm working with Scott on preparing the earth blocks that will be needed for the workshop. I think it would be a great chance for us to do field testing of your mixer design. We would ship the mixer to Oklahoma and then tow it to Belize for the workshop in November.

Now I realize that's a big ask and I'm expecting you to pass, but maybe you are interested in the opportunity to see your mixer design at work in Belize. Of course, I could fabricate one but we are on a time constraint and I'm not sure what kind of a workshop they have down there. I know you had a machine shop laser out most of the parts to make fabrication easy. I suppose we could order a kit and fab it ourselves.

Let me know what your thoughts are on it,

Best,
Aidan Williamson
